

Prompt Engineering

Task-4

Example-1

Prompt1: Act like an interviewer

Output:

- “Tell me about yourself.”
- “Why should we hire you?”
- “What are your strengths and weaknesses?”

>Prompt2:Simulate a job interview assistant for a software developer role. Ask 5 structured questions: background, technical skills, teamwork, problem-solving, and career goals. Provide feedback after each answer.

>Output:

-Question 1: Background

“Can you describe your background in software development?”

➡ Feedback: A strong answer should highlight education, past projects, and relevant work experience. Keep it concise but impactful.

-Question 2: Technical Skills

“What programming languages and frameworks are you most confident in?”

➡ Feedback: Mention specific languages (e.g., Python, Java, JavaScript) and frameworks (React, Django, Spring). Employers value clarity and evidence of hands-on use.

Question 3: Teamwork

“Tell me about a time you worked in a team to solve a technical challenge.”

➡ Feedback: Focus on collaboration, communication, and your role in the team. Show how you contributed to success, not just the technical fix.

-Question 4: Problem-Solving

“How do you approach debugging complex code or resolving unexpected errors?”

➡ Feedback: A good answer explains a systematic approach — reproducing the bug, isolating the issue, testing solutions, and documenting fixes. Employers want to see logical thinking.

-Question 5: Career Goals

“Where do you see your career in five years?”

➡ Feedback: Align your goals with growth in software development (e.g., becoming a senior developer, leading projects, or specializing in AI/cloud). Show ambition but keep it realistic.

Comparison:

Prompt 1: “Be my Tutor”

- Instruction Type – Very broad and vague; no subject, level, or format specified.

- Output Style – Generic response: the assistant asks back for clarification (“What subject would you like to learn?”).

- Consistency – Results vary because the AI has to guess what kind of tutoring you want.

- Use Case – Works for casual brainstorming, but not effective for structured learning.

◆ Prompt 2: “Simulate a science tutor for grade 6. Explain the water cycle step-by-step, give one example diagram description, and then quiz me with 2 practice questions.”

- Instruction Type – Clear and specific; defines subject (science), level (grade 6), and format (explanation → diagram → quiz).

- Output Style – Structured teaching session with step-by-step explanation, visual description, and interactive quiz.

- Consistency – Highly predictable and reproducible because the format is fixed.

- Use Case – Perfect for actual tutoring practice, study sessions, or lesson simulations.

Example-2

Prompt1: Be my Tutor

>Sure, I can be your tutor. What subject would you like to learn? Do you prefer me to explain concepts, give examples, or quiz you?"

Prompt2: Simulate a science tutor for grade 6. Explain the water cycle step-by-step, give one example diagram description, and then quiz me with 2 practice questions.

Output:

-Step-by-Step Explanation of the Water Cycle

- Evaporation – Water from oceans, rivers, and lakes heats up from the sun and turns into water vapor.

- Condensation – The vapor rises, cools, and forms tiny droplets that gather into clouds.

- Precipitation – When clouds become heavy, water falls back to Earth as rain, snow, or hail.

- Collection – Water gathers again in rivers, lakes, and oceans, restarting the cycle.

-Example Diagram Description

“Imagine a picture where the sun shines on the ocean. Arrows show water rising as vapor into the sky. Clouds form above, and raindrops fall back down onto mountains and rivers. The rivers carry water back to the ocean, completing the cycle.”

Practice Quiz (2 Questions)

- Question 1: What process turns liquid water into vapor?

- Question 2: When clouds become heavy and water falls back to Earth, what is this stage called?

Comparison:

Prompt 1: “Be my Tutor”

- Instruction Type – Very broad and vague; no subject, level, or format specified.
- Output Style – Generic response: the assistant asks back for clarification (“What subject would you like to learn?”).
- Consistency – Results vary because the AI has to guess what kind of tutoring you want.
- Use Case – Works for casual brainstorming, but not effective for structured learning.

◆ Prompt 2: “Simulate a science tutor for grade 6. Explain the water cycle step-by-step, give one example diagram description, and then quiz me with 2 practice questions.”

- Instruction Type – Clear and specific; defines subject (science), level (grade 6), and format (explanation → diagram → quiz).
- Output Style – Structured teaching session with step-by-step explanation, visual description, and interactive quiz.
- Consistency – Highly predictable and reproducible because the format is fixed.
- Use Case – Perfect for actual tutoring practice, study sessions, or lesson simulations.

Example-3

Prompt1: Teach me English

->Step 1: Explanation

Greetings are the first words we use when meeting someone. They set the tone for communication. In English, greetings change depending on the time of day or situation.

->Step 2: Examples

- Hello – general greeting, anytime.
- Good morning – used before noon.
- Good afternoon – used after noon until evening.
- Good evening – used in the evening.
- Goodbye – when leaving.
- Nice to meet you – when meeting someone for the first time.

->Step 3: Practice Quiz

-Fill in the blank: ___, how are you?

-Which greeting would you use at 9 AM?

-What do you say when you leave a friend's house?

->Step 4: Feedback (Sample Answers)

-“Hello, how are you?”

-“Good morning.”

-“Goodbye” or “See you later.”

Prompt2: Simulate a language tutor for English beginners. Teach 5 common greetings, give pronunciation tips, and then quiz me with fill-in-the-blank sentences.

-> 5 Common Greetings

- Hello – Standard greeting, used anytime.

- Hi – Casual, friendly version of “Hello.”

- Good morning – Used before noon.

- Good afternoon – Used after noon until evening.

- Good evening – Used in the evening or at night.

-> Pronunciation Tips

- Hello → Say heh-LOH (stress on the second syllable).

- Hi → Simple, just H-eye.

- Good morning → Gʊd MOR-ning (make “mor” sound like “more”).

- Good afternoon → Gʊd AF-ter-noon (stress on “af”).

- Good evening → Gʊd EEV-ning (smooth “eev” sound).

👉 Tip: Speak slowly, emphasize the stressed syllable, and practice aloud 2–3 times.

->Quiz: Fill in the blanks

Try to complete these sentences with the correct greeting:

- When you meet a friend at 9 AM, you say: Good _____.

- At night, when you see someone, you say: Good _____.

- A casual way to greet a classmate is: ____!

- The most common greeting used anytime is: _____.

- At 3 PM, you greet someone with: Good _____.

Comparison:

- Structure: Prompt 1 → step-by-step lesson; Prompt 2 → tutor simulation.
- Content: Prompt 1 → broader (greetings + goodbye + meeting phrases); Prompt 2 → focused (5 greetings only).
- Quiz style: Prompt 1 → quiz + answers; Prompt 2 → quiz without answers (learner engagement).
- Tone: Prompt 1 → formal, instructional; Prompt 2 → conversational, interactive.
- Audience impact: Prompt 1 → feels like reading notes; Prompt 2 → feels like practicing with a tutor.
